

## Moscow Experimental Development Management Company

Eliminated delays throughout projects deadlines due to careful control during each stage of construction.

# Goal

The main goal was to develop a single platform for the continuous sites monitoring as well as general and project data storage of the company.

## SOLUTION

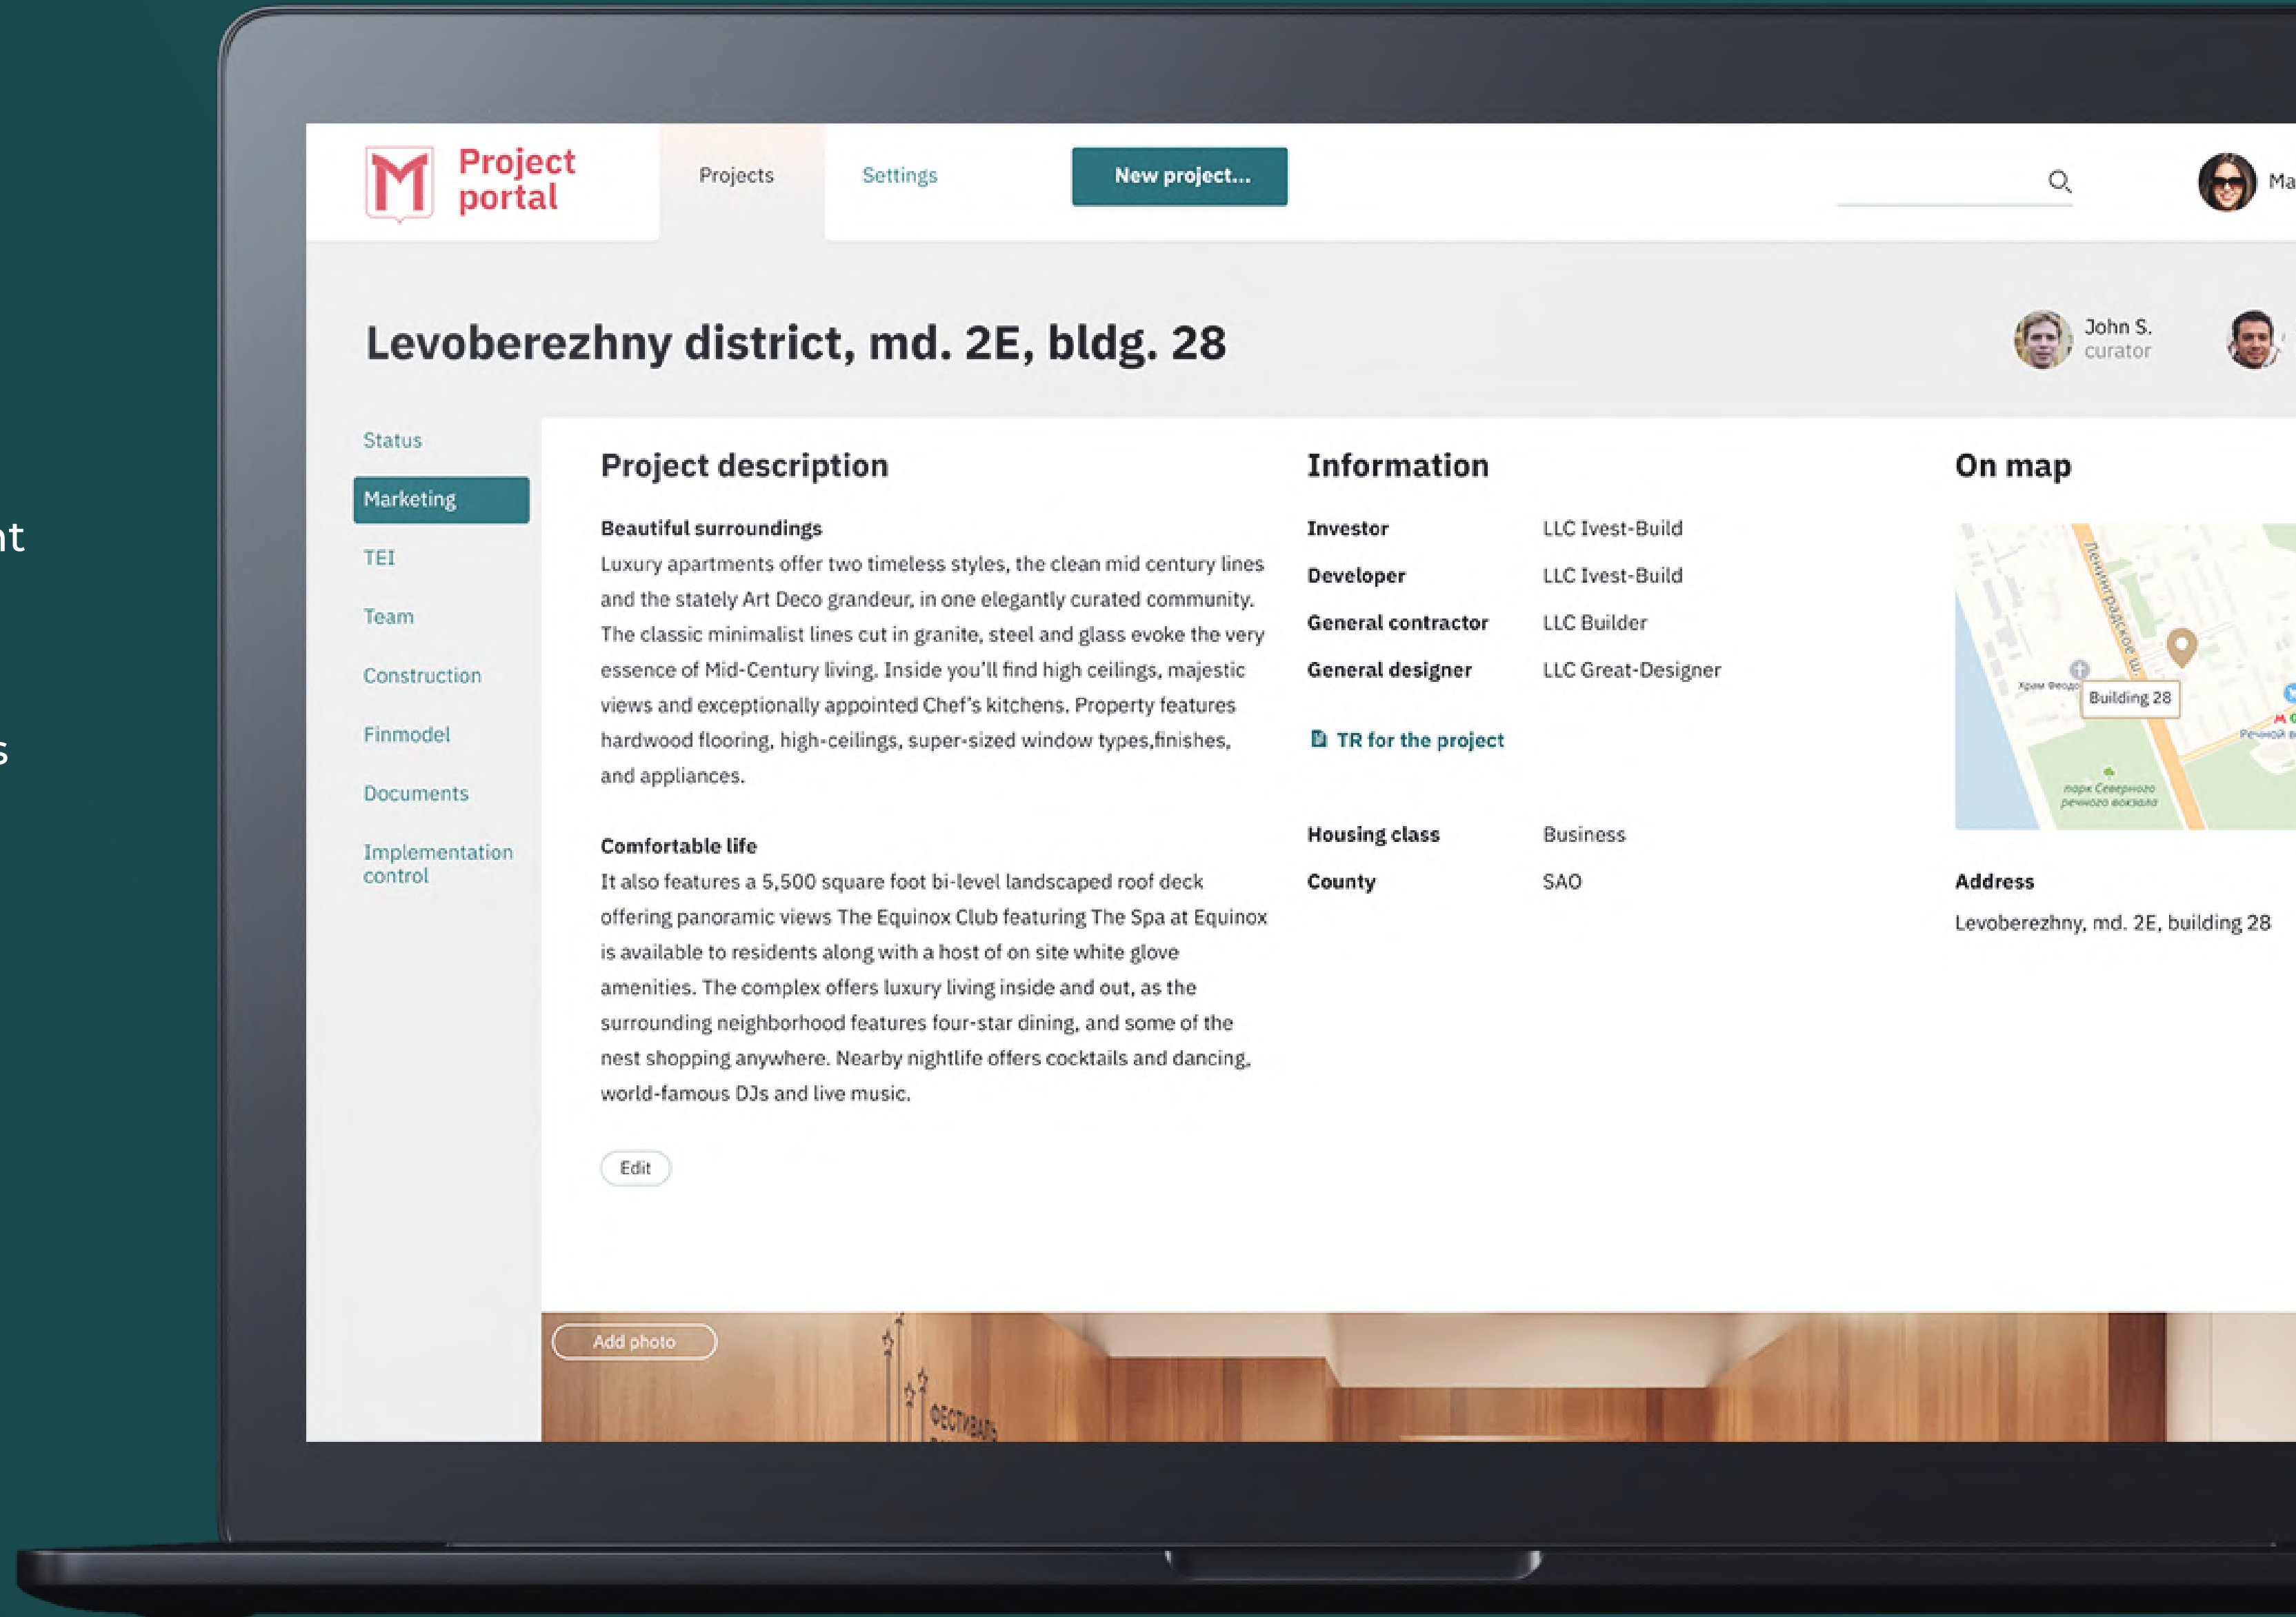

# Project ID module

Module for storing all projects' information in one place. Some of the data stored:

- ✓ Marketing information to showcase to the client
- ✓ Project's technical and economic indicators
- ✓ List of employees and their key tasks in regards to the project
- ✓ Complete list of all project's documentation stored in a convenient database
- ✓ Project's financial model and current budget expenditures

**50%** increase in overall working processes speed

**StecPoint**

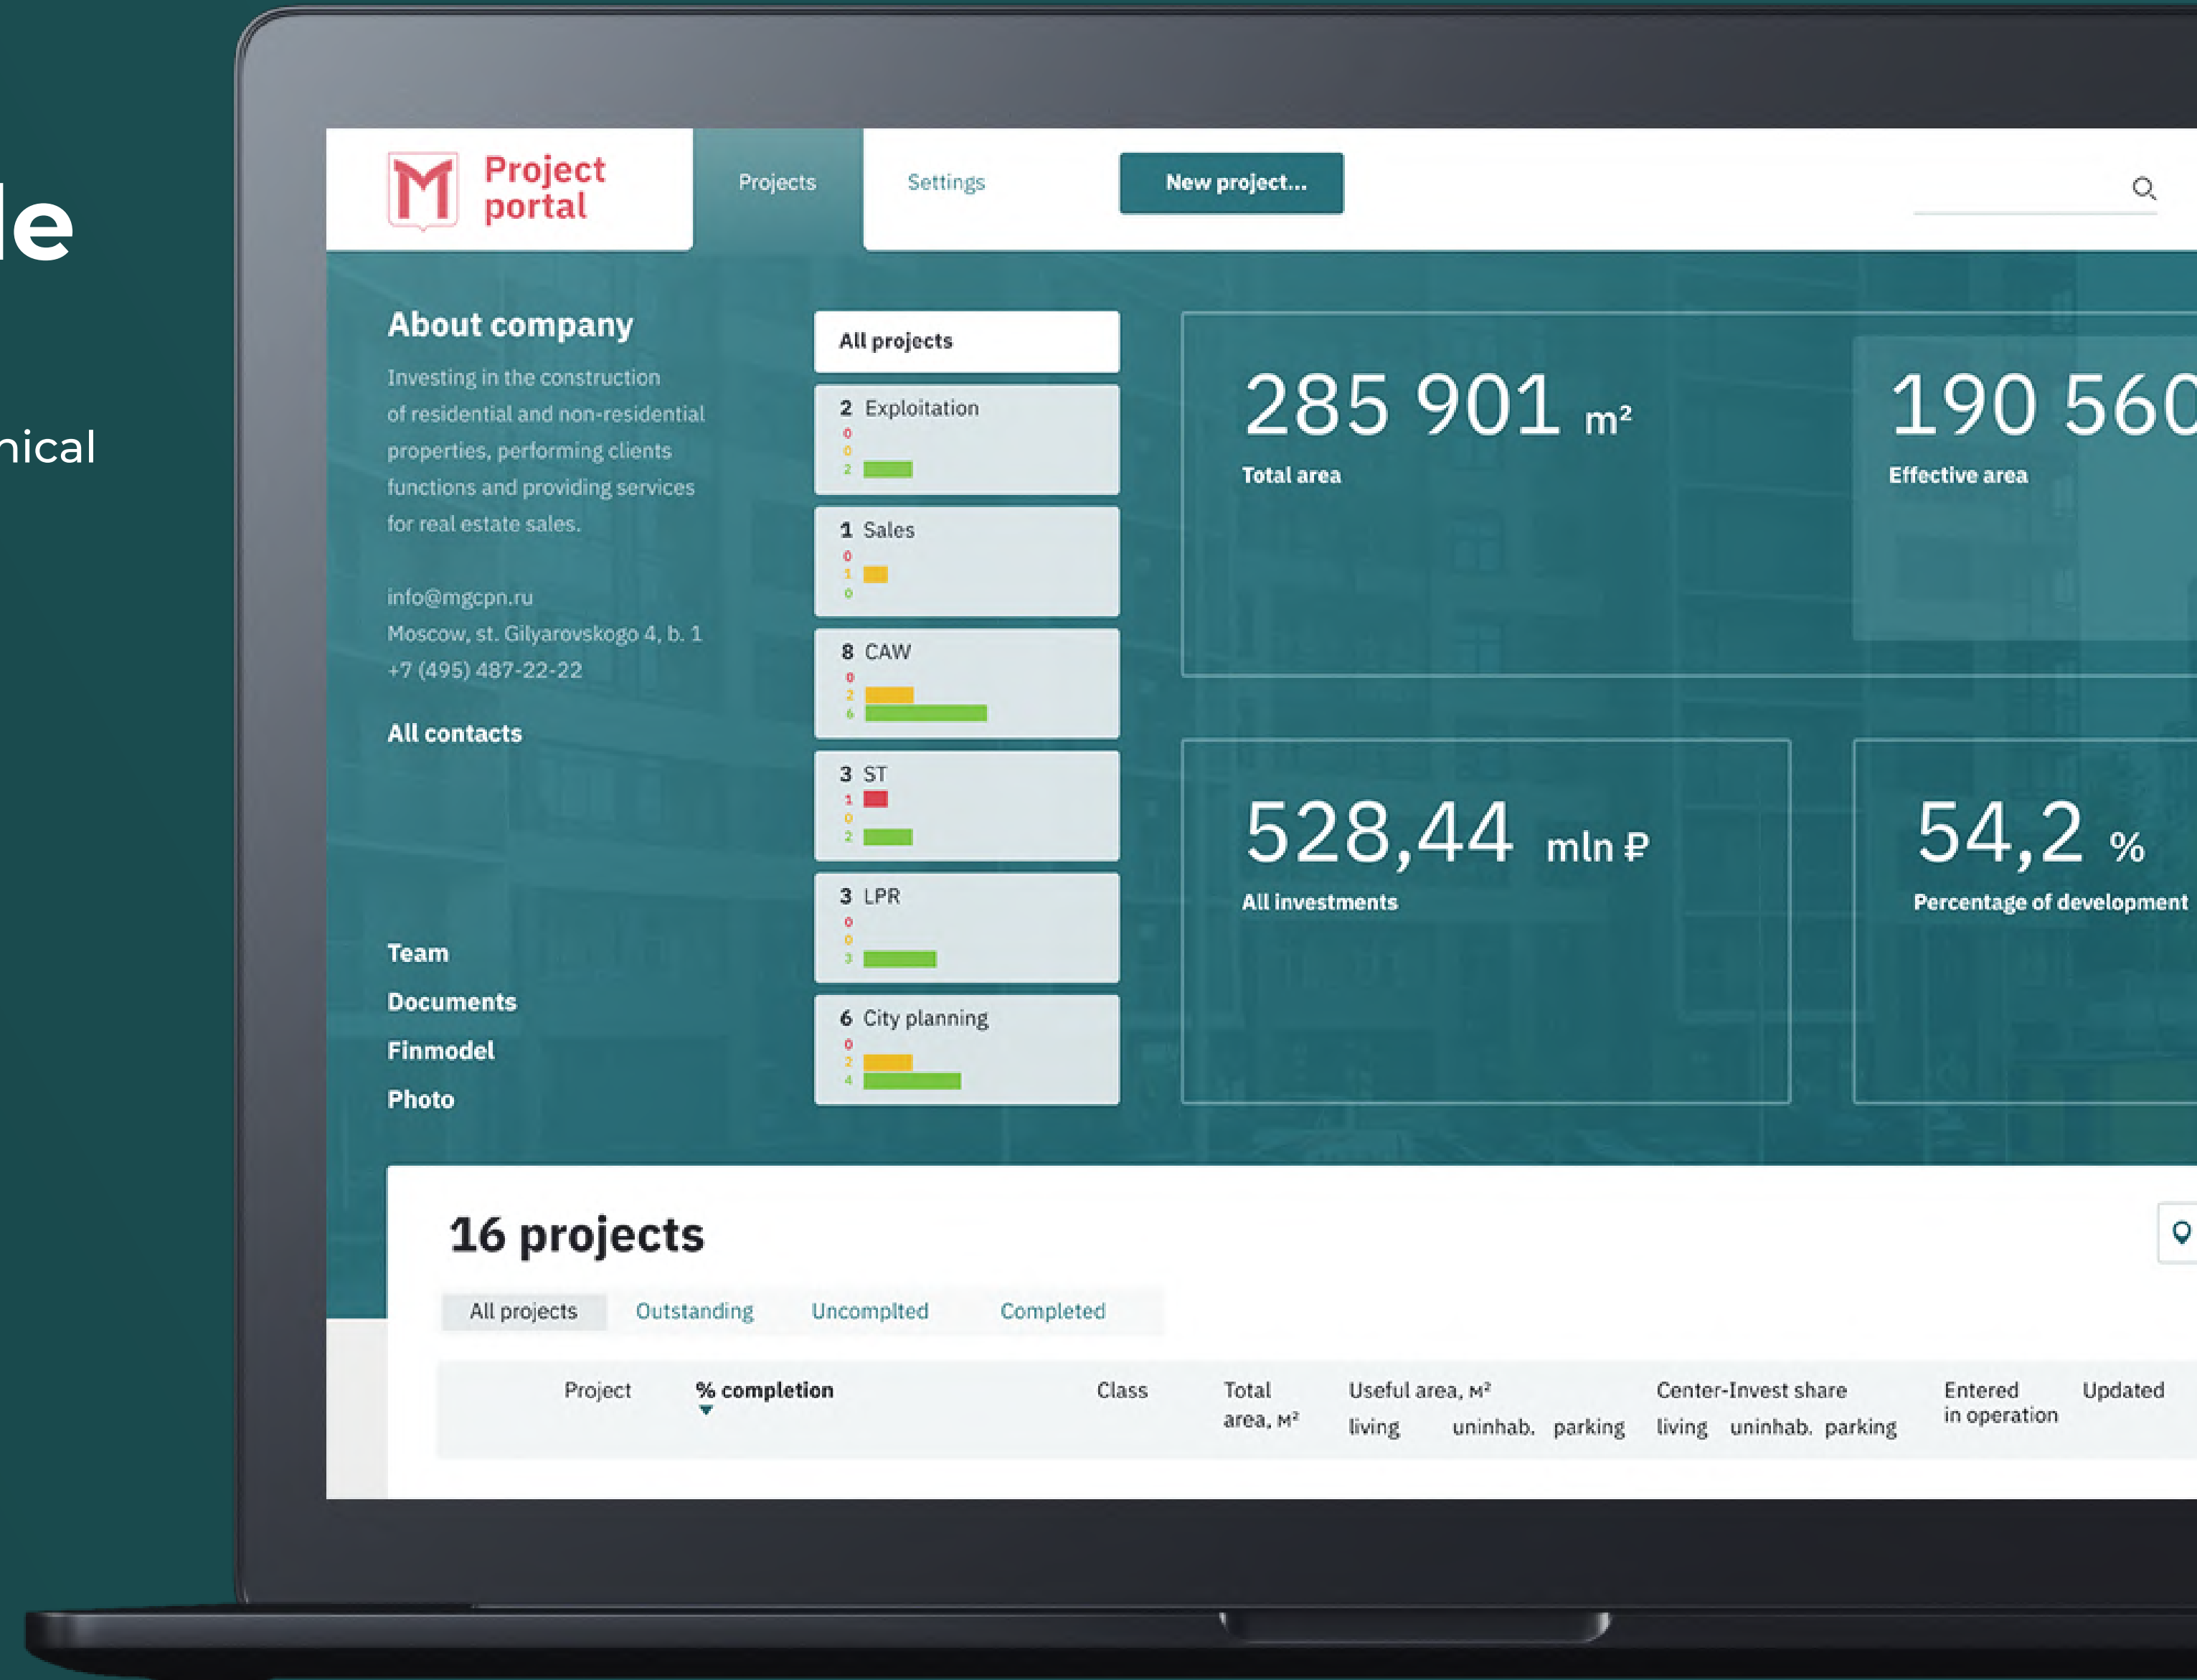

# Prompt reporting module

Developed module with tabular and graphical reporting feature. Collected data was presented in a convenient graphical form with an emphasis on indicators regarding deviations.

The main module's metric:

- ✓ Construction stages status
- ✓ Key indicators for current projects
- ✓ Delays in project tasks
- ✓ Sales statics during occupancy stages

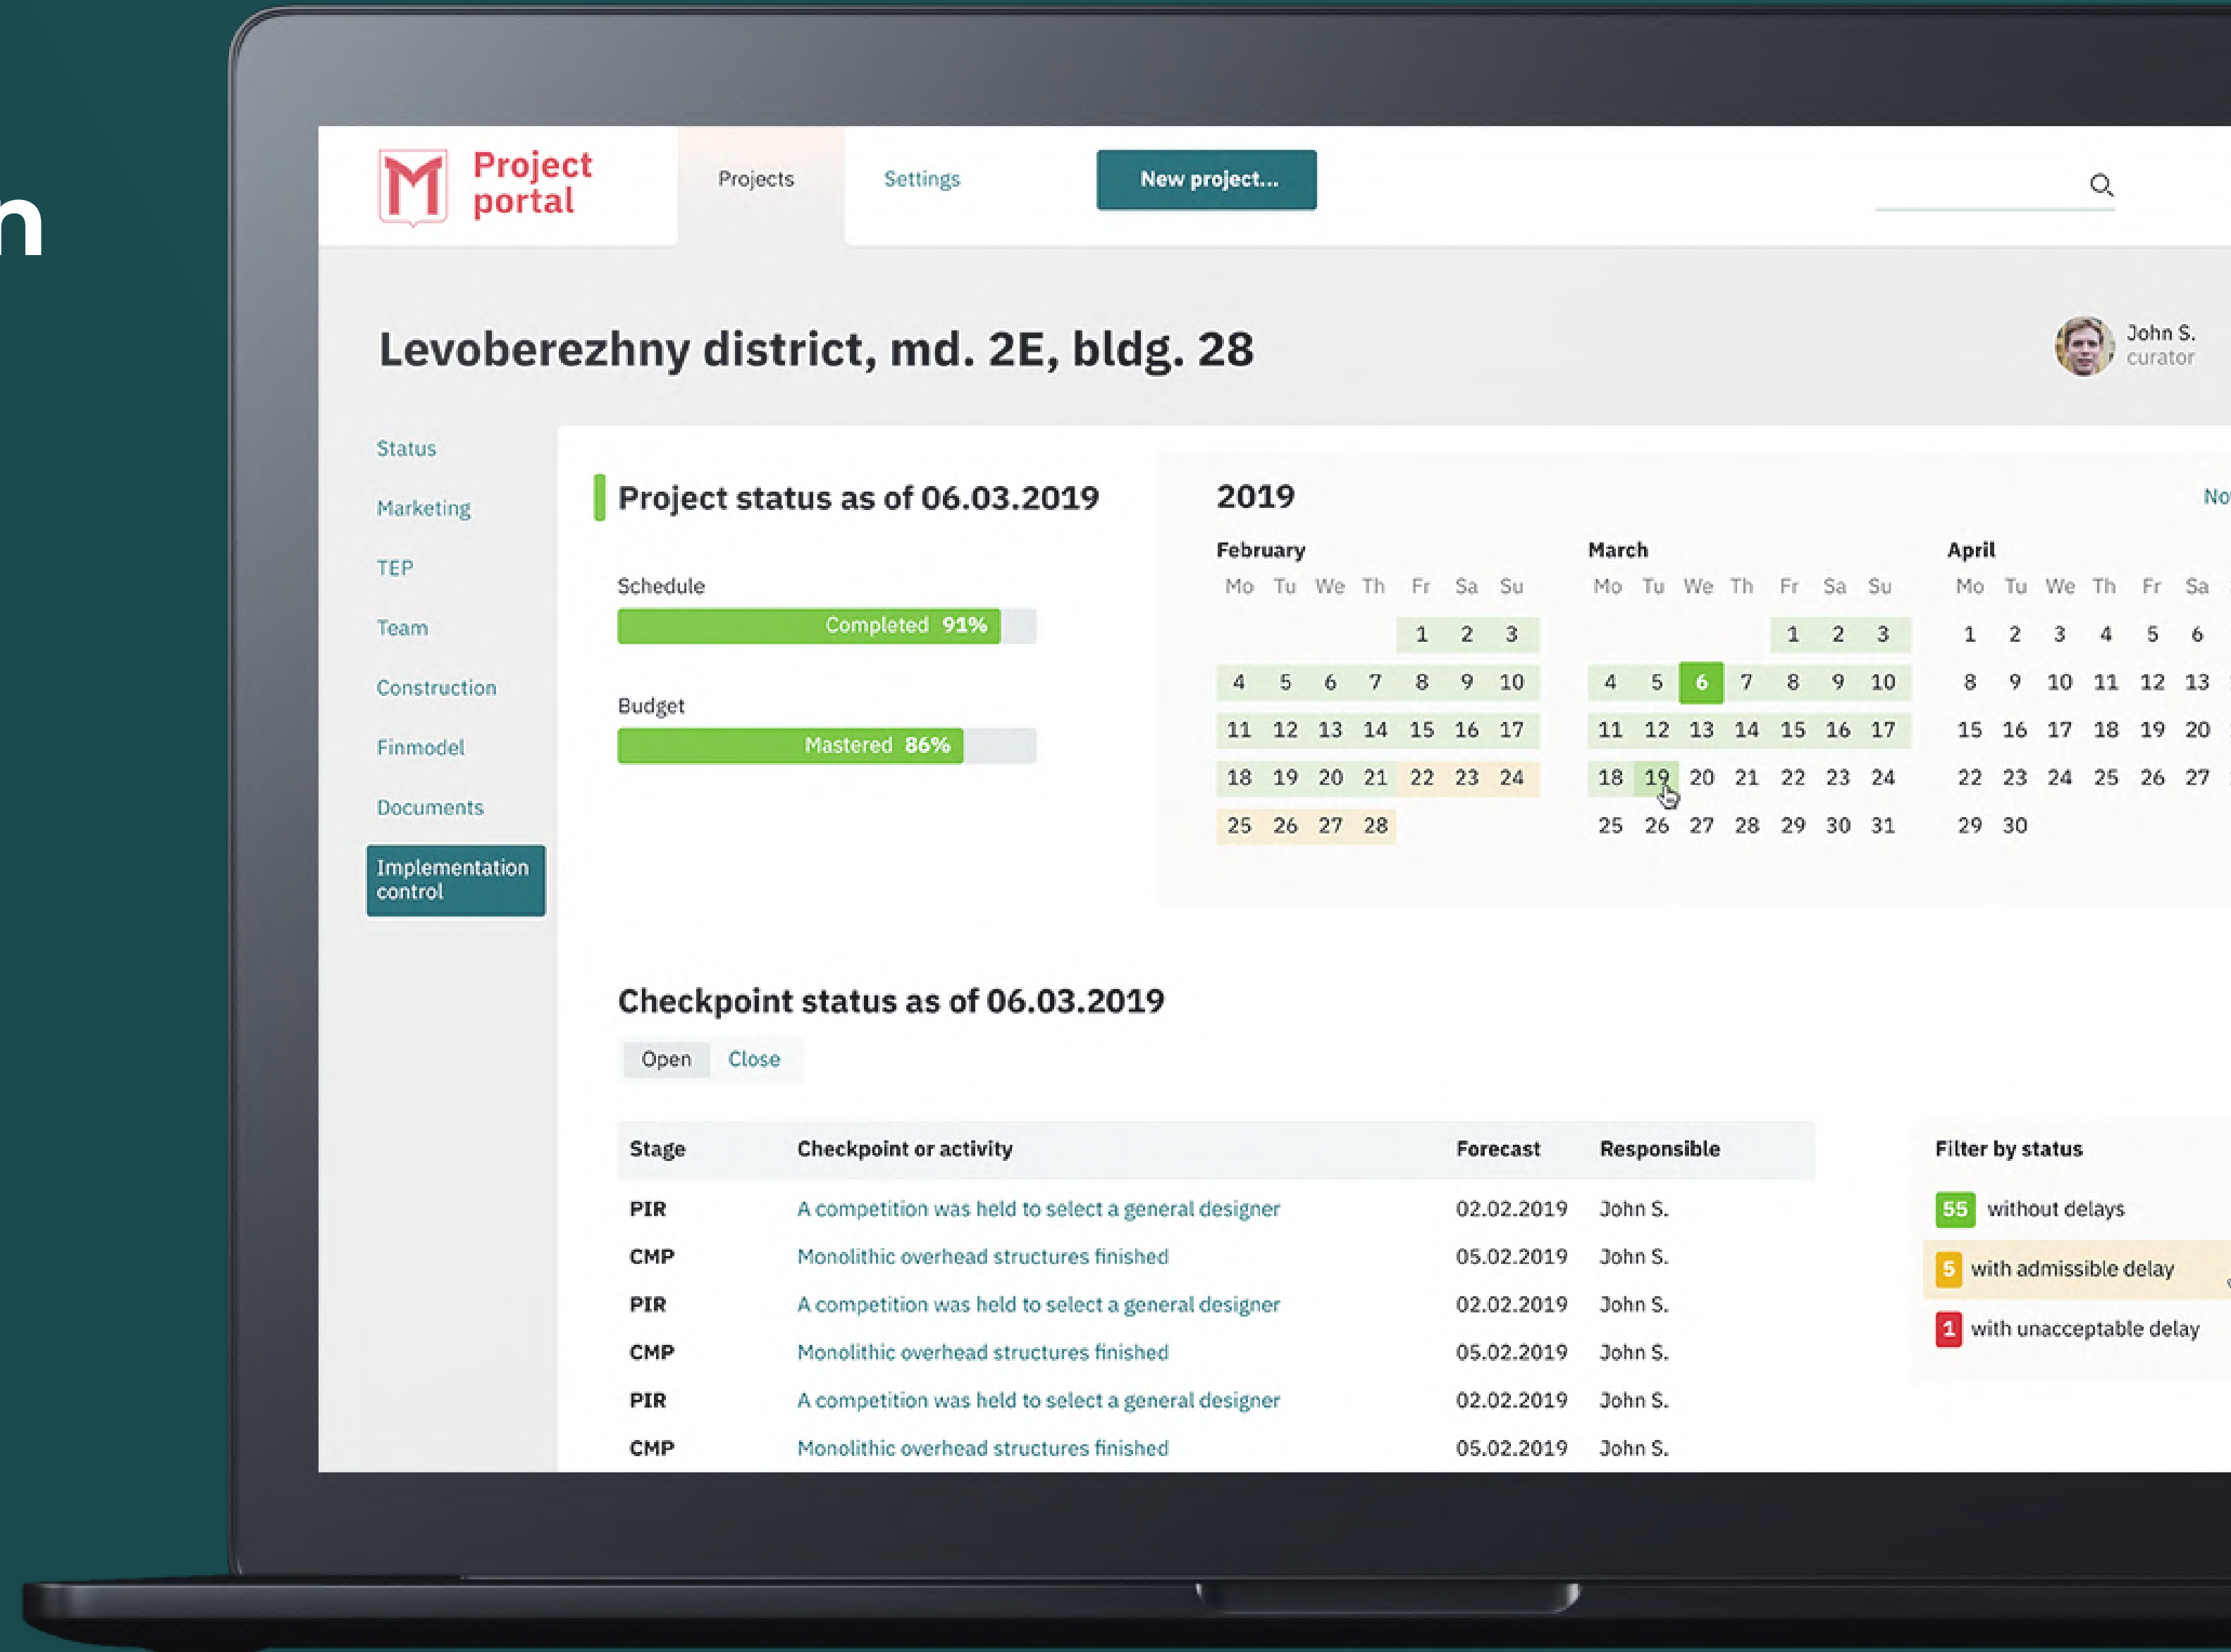

Information is presented both for each specific project and for the company as a whole. In addition, construction sites can be viewed on a map in real-time.

# Project Implementation Analysis Module

For each project, data slices were displayed to analyze the situation over time. Among those features:

- ✓ Convenient graphical representation of information
- ✓ High performance when working with big data processing
- ✓ User focus on problem areas during project implementation

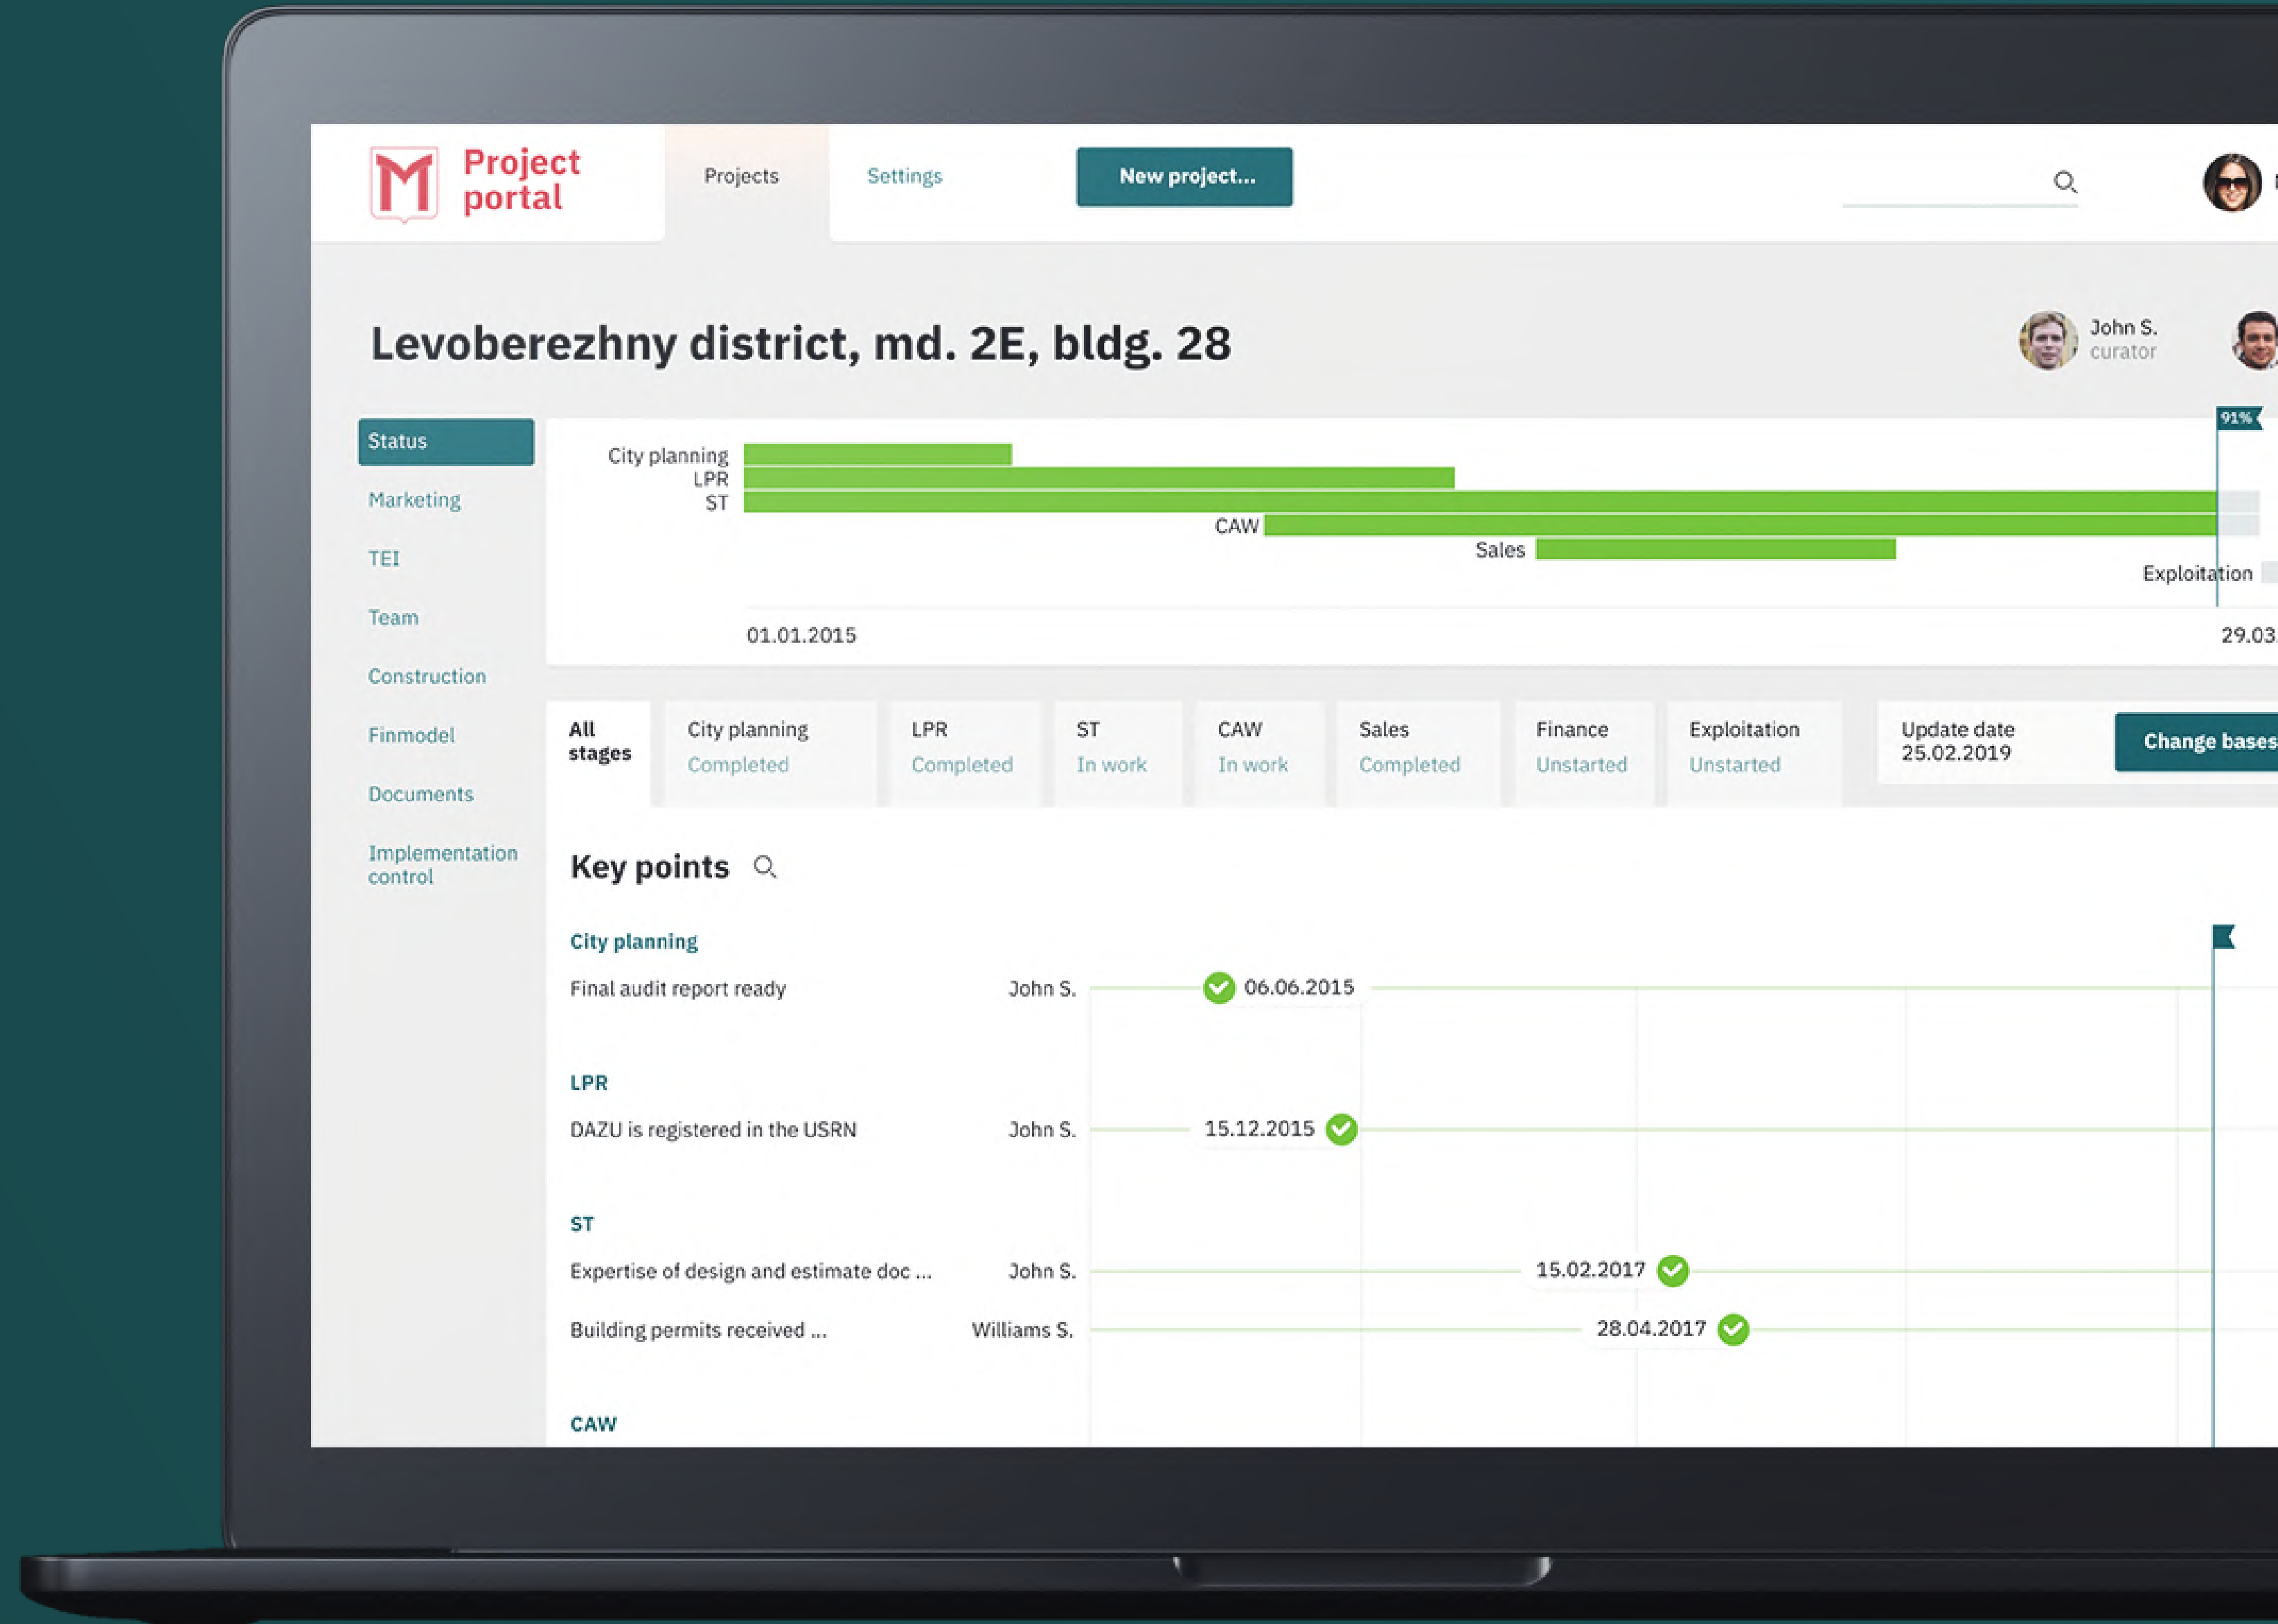

# Planning module

Developed a module that helps:

- ✓ Plan key points within the construction process
- ✓ Promptly collect current status and reasons for deviations from the plan
- ✓ Quick response to violated deadlines
- ✓ Analyze the reasons for deviations and delays for the upcoming projects

## 100%

success rate when it comes to meeting project deadlines

# Put your trust in StecPoint
